

## Project Profile

## Custom Home McLeod County, MN

### R-Control Systems

Multiple R-Control EPS building systems were chosen in the design of this energy efficient home.

- ◆ R-Control ICF(Insulated Concrete Forms) as a foundation system
- ◆ R-Control SIPs for walls and roof

### Comfort

The home took advantage of the near by pond, using a geothermal heat pump system. The comprehensive energy design of the home provides for low and stable heating/cooling demand. Air quality in the house was insured by the use of an efficient air-to-air heat exchanger made by Venmar.

### Quick Facts

**3700 sq. ft.**

**R-Control ICF Foundation**

**R-Control SIP Walls and Roof**

**Builder: Tom Lemmerman**
