

## Project Profile

## Student Housing Missoula, Montana

### R-Control SIPs

R-Control SIPs (structural insulated panels) were selected in the design of this university student housing complex. R-Control SIPs provided an energy efficient wall system and reduced air leakage. Reducing air leakage provides a more comfortable living environment for the students.

Construction continued without delay throughout the harsh Montana winter.

### Speed of Construction

The fast installation of the R-Control SIP walls helped expedite the builder's construction schedule. The 182' x 48' three story building was ready for finishing within 12 days.

### Quick Facts

**11 three story student housing buildings**

**Builder: Bodell Const.**

**Architect: DT Architects**

**Mike Dowling**

**Helena, MT**
