

# Main Street Plaza

## Application

16,000 cubic feet of EPS 12 and EPS 19 Geofom were used as light weight landscape and concrete void fill in the plaza and parking garage adjacent to the Mormon Tabernacle in Salt Lake City, Utah.

## Project Details

Summer 2000, engineers required a light weight fill material to reduce the weight of the Tabernacle's plaza on a below-grade parking structure. Tapered concrete void fill Geofom was used in the underground parking garage to create ramps and reduce the volume of costly concrete.

Low density, high strength EPS Geofom was also used in planter boxes and landscaping above-grade to reduce the weight of the plaza on the 260,000 square foot parking structure below. The plaza features architectural concrete, stone, landscape formations, fountains, statues and a reflecting pool.

## Geofom

### Main Street Plaza

- Salt Lake City, UT
- Summer 2000
- Geofom Concrete Void Fill & Landscape Fill
- 16,000 Cubic Feet
