

# Mountain Thunder Lodge

## Application

53,304 square feet of R-Control® Structural Insulated Panels were used in a roofing application for 2 buildings at the Mountain Thunder Lodge in Breckenridge, Colorado.

## Project Details

Winter 2001, builders of Mountain Thunder Lodge required an energy efficient roofing solution that also provided easy installation. Energy efficiency was especially important due to the resort being located in a chilly mountain climate. 53,304 square feet of 11-1/4" Structural Insulated Panels were installed on building 1 and building 5 at Mountain Thunder Lodge.

Structural Insulated Panels have been used nationwide in LEED certified projects for their inherent energy efficiency and ability to be made with recycled materials.
