

Redford Conference Center

Application

15,152 square feet of R-Control® Structural Insulated Roof Panels framed and insulated the new Redford Conference Center in Sundance, Utah.

Project Details

Spring 2010, actor Robert Redford, owner of Sundance Resort, worked closely with Salerno Architects to select environmentally friendly and energy efficient products for the new conference center. R-Control® Structural Insulated Panels (SIPs) were selected for the project for their inherent energy efficiency and structural performance. The exceptional strength of SIPs provides the ability to resist snow loads while spanning over custom built timber frame trusses. SIPs were also selected for the project because of their reputation for efficient installation and labor-time savings.

According to Shawn Pollard, Project Superintendent at R & O Construction, "The R-Control® SIPs product allowed for quick and efficient installation on the roof areas of the conference center allowing work on the interior of the structure to move forward." A total of 15,152 square feet of 8-1/4" and 12-1/4" R-Control® Structural Insulated Panels were used to frame the three roof areas of the Redford Conference Center.
