

Stuass Hospital

Application

160,000 board feet of Wall Specification Grade (WSG) expanded polystyrene (EPS) was installed in an Exterior Insulation Finish System on the Stuass Hospital. An additional 50,000 square feet of custom architectural shapes completed the exterior of the building.

Project Details

Spring 2007, exterior insulation finish systems were installed on the Stuass Hospital in Galena, Illinois to provide the building with architectural detail and energy efficiency at a lower cost than traditional stucco. ACH Foam Technologies provided the EPS for the exterior insulation finish system.

In addition to Wall Specification Grade EPS, ACH Foam Technologies also provided custom architectural shapes that added additional architectural detail to the exterior of the building.
