

Wisconsin Dept. of Corrections

Application

3,688 square feet of R-Control® Structural Insulated Panels (SIPs) with Frame Guard® were used to frame the Wisconsin Department of Corrections Office in De Pere, Wisconsin.

Project Details

Summer 2008, Structural Insulated Panels were specified for its superior energy efficiency, added protection of the Frame Guard® treatment to resist mold and mildew and its availability of testing and information to create shear wall designs. SIPs are used nationwide in LEED certified projects, which made them more appealing to the project's architect.

SIPs also offer flexible design opportunities, superior strength, reduce jobsite waste and speed construction time.

Additional ACH Products

Foam-Control® expanded polystyrene (EPS) installed as header fill.
