Vegetative Roofs

A lightweight, easy to install insulation and fill material for Vegetative Roofs.

Foam-Control® Geofoam is a cost effective, durable, time saving, and light weight insulation and fill solution for vegetative roof designs. Vegetative roofs add weight for soil/growing medium, planters, pavers, plantings, etc. on the structural roof deck. Foam-Control Geofoam reduces weight resulting in a more economical structural roof deck and provides insulation that results in energy savings.

- Super lightweight compared to other fills
- Allows for mixing intensive and extensive designs
- Easy fabrication for landscaping contours
- Provides insulation performance

Compressive Resistance/R-value.

Sizes and Shapes.

Foam-Control Geofoam can be made in large or small, thick or thin sections. It can be custom cut in sizes ranging from a few square inches up to 3’ x 4’ x 16’. Shop drawings for custom projects are easily produced on computer aided cutting equipment.

FOAM FACE-OFF:

Choosing Foam-Control geofoam over other insulation and fill materials for vegetative roof designs

- Geofoam can easily vary strength, thickness, and size
- Geofoam arrives ready to place in all weather conditions
- Geofoam is the best value lightweight and insulation fill material
- Geofoam blocks add very little weight to the roof deck
- Geofoam can be fabricated to create more landscape design possibilities
Proven to meet, or exceed, building codes.

Foam-Control Geofoam is manufactured under an industry leading quality control program monitored by UL and further recognized in UL Evaluation Report UL ER11812-01. Foam-Control meets ASTM D6817, “Standard Specification for Rigid, Cellular Polystyrene Geofoam.”
