ACH Foam Technologies is a molder of EPS Lost Foam patterns for foundry applications. Lost foam casting offers design flexibility and opportunities to consolidate multiple castings into one component.

We utilize the latest technology in molding and pattern assembly equipment to produce high quality foam patterns. These patterns are the form for casting metal OEM parts such as engine blocks, heads, crankcases and other components.

Our team of technical professionals can facilitate the tooling process from tool design to tool build. We have in-house CMM capabilities for precision measurement and have ISO 9001 registered facilities in Wisconsin & Iowa*

*Note: Design activities are not conducted at the ISO 9001 registered facilities, these facilities manufacture products to meet customer specified designs.
