Construction of the 1.1 million-square-foot Uline Distribution Center in Pleasant Prairie, Wis., was completed during the summer of 2009. M.M. Schranz Roofing and Sheet Metal Inc., Milwaukee, performed the roofing work, which included installing one 2½-inch-thick layer of ACH Foam Technologies’ Type II Foam-Control® EPS insulation—a total of 2.75 million board feet—over the building’s structurally sloped steel roof deck in a Firestone Building Products ballasted EPDM assembly. The roof incorporates 245 skylights that provide natural light and reduce the facility’s electrical costs.
