High Adventure Recreation

Application

3,200 cubic feet of Foam-Control® EPS15 Geofoam was installed as a lightweight concrete pool fill at the High Adventure Recreation Center in Ogden, Utah.

Project Details

Summer 2006, contractors installed Foam-Control® Geofoam beneath the 2nd level swimming pool to reduce the weight on the structure. Geofoam replaced 150 lbs. per cubic foot of concrete with 1 lb. per cubic foot of Geofoam.

By using Foam-Control® Geofoam, contractors were able to reduce the weight of the pool by 470,000 lbs. Geofoam was also used for stadium seating in the recreation center’s cinemas.
